html to image in python

I want to convert following html to image(png) in python.

```
<html>
    <b>Bold text</b>
</html>
```

This html is, of course, an example.

I have tried 'pisa' but it converts html to pdf, not to image. I can convert html to pdf and then convert pdf to png, but i was wondering if there is any direct solution(i.e html to png). Any built-in or external module will work nicely.

if this can be done in Graphicsmagick or Imagemagick, then it will be perfect.

Thanks.

python html image imagemagick graphicsmagick

webkit2png. The original version is OSX-only, but luckily there is a cross-platform fork: https://github.com/AdamN/python-webkit2png
