## How to communicate with a webpage via browser plugin

Nicht nur einmal  
mit Profis arbeiten.

How can I communicate from a JavaScript code of a webpage to the main code of the add-on?

For example, something like this: If some element is clicked, in the corresponding event handler of the page script, which is the syntax that can be used to send some message to the main code? Is it possible?

Specifically, something like this, where the **frame** now must be replaced by a generic webpage. Is it possible?

javascript firefox-addon-sdk message-passing

2 No real question here.. What have you tried ? What have you researched ? Anything at all?  
[developer.mozilla.org/en-US/docs/Web/API/GlobalEventHandlers/...](https://developer.mozilla.org/en-US/docs/Web/API/GlobalEventHandlers/...) "Developers trust Stack Overflow to help solve coding problems" - I don't see a coding problem here to be solved. – Pogrindis 19 mins ago

1 -> Do NOT revert back to original title. – Pogrindis 15 mins ago

### 1 Answer

Yes it is possible.

```
document.onload = function() {  
  var elementYouWant = document.getElementById("someID");  
  
  elementYouWant.onclick = console.log("Yup.. It was clicked..");  
};
```

Reference.
