## Why Blogger add header widget automatically?

```
$ git push origin stackoverflowcareers
```

Add repos

I create a template for my blog on Blogger.

I have section :

```
+-----+
|  Navbar  |
+-----+

+-----+
| Logo-Image |
+-----+

+-----+
| main | header |
|      | +-----+
|      | | sidebar-right |
+-----+

+-----+
| footer |
+-----+
```

I don't understand why, when I import my blog theme with XML file, Blogger add a second header in main section ?

If you when see result, you can goto <http://emericmartineautest.blogspot.fr>

Somebody know why ?

I don't see anything about that in online documentation.

Regards,

blogger
