Summary model in Django [on hold]

Work on work you love.

From home.

Hi I'm new on Django and I don't have much experience in programming. Unfortunately I got stuck with my project. I have lots of objects in my database which differ from each other in two attributes - price and location. I would like to display all of the unique objects on my page with a button that would lead to the details. So I'm thinking about a new summary model with the data from my initial model. My question is - is there any way to make new model with a summary data from a different model and with autocompleting rows in this new model (I would like them to complete every time I add a new object to an initial model).

python django

There are either too many possible answers, or good answers would be too long for this format. Please add details to narrow the answer set or to isolate an issue that can be answered in a few paragraphs.

If this question can be reworded to fit the rules in the [help center](#), please [edit the question](#).

2 Hi, Welcome to StackOverflow. Here, we people are ready to help someone who is trying something, stuck with an obstacle and then wants help overcoming that. We do not specialize in helping someone who Unfortunately got stuck with their project – [Aswin Muruges](#) 8 hours ago

Let us know what you have tried and point out where you are exactly stuck. – [Mukund Gandlur](#) 8 hours ago
